

CENTRAL OHIO SEED TESTING

Cover Crop Seed Special

Cover Crop Seed Testing \$160.00

Package Includes Three Tests for Assessing Cover Crop Seed Quality

Germination Test – This simulates field emergence potential of seedlots under ideal temperature, moisture and light conditions.

Mechanical Purity – The test is required on most seeds for labeling (vegetables, flowers and others are exempt.) The sample is examined under magnification, and the analyst determines the amount of pure seed, weed seed, other crop seed, and inert (chaff, soil peds, etc.)

Noxious Weed Exam – The exam uses a larger quantity of seed and reports the number of any noxious weed seeds per pound for seedlots. This information is very important for preventing the spread of invasive and noxious weeds.

Sample Size: – A sample size of at least 500 grams should be sent for “The Cover Crop Seed Special” test. For cereal seed kinds such as wheat, rye, and oats indicate if the seed is new crop or carryover prior year seed. Uncleaned low grade & difficult samples or mixtures will be charged at \$49/hr.
