OHIO CERTIFIED SEED

About This Directory

The following lists of seed growers include only those whose fields were planted with eligible seed stocks and whose applications for seed certification were received by the publication date.

In no case is the seed yet **CERTIFIED**, for it must be cleaned, tested in the laboratory, and labeled with the official certification tag before it can be offered for sale as **CERTIFIED SEED**.

Seed certification is the means of maintaining the pedigree of a specific variety of seed. Seed producers voluntarily use seed certification to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting certification requirements and thereby assures the farmer of obtaining true varietal performance of the variety named on the label.

Each seed company sets their own standards for mechanical purity and germination. The Ohio Seed Law requires that each container of seed be labeled as to its origin, the germination percentage and date of test, the percentage of weight of pure seed, other crop seed, weed seed, and inert matter. The label is commonly referred to as an analysis tag. By studying both the **CERTIFIED SEED** and **ANALYSIS TAGS**, one can determine the quality of seed in the container. Inquiries for seed and requests for samples should be sent directly to the growers listed, and not to the Ohio Seed Improvement Association. This directory is for informational purposes and is not a solicitation to buy product.

Plant Variety Protection

The developer of a new distinct variety may obtain protection for that variety if they choose to do so, provided the variety meets the requirements of the Plant Variety Protection Act of 1970. This Act permits the owner or developer of a variety to prohibit others from selling, sexually multiplying, using for propagation for seed, or using their seed to produce a hybrid seed of their variety.

Two options for plant variety protection are available to the developer of the variety. Under the first option, the developer of the variety or his agent may sell either certified or uncertified seed of the variety. If the developer of the variety has reason to believe that anyone is infringing on their rights, they may resort to civil action. The other option ("certification option") for protecting a variety utilizes the provisions of Title V of the Federal Seed Act. A variety protected in this manner may be sold by variety name only as a class of certified seed.

It is the responsibility of the seller to inform the buyer if the variety is protected. Each container of seed sold should be labeled with a tag indicating the type of protection which the owner has. Under the first option, the label will state: "Unauthorized Propagation Prohibited - U.S. Protected Variety."

If the owner of the variety has chosen the other option for variety protection, the label will state, "Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only as a Class of Certified Seed - U.S. Protected Variety."

The Plant Variety Protection Act was amended October 6, 1994, and became effective April 4, 1995. Substantive and procedural changes to the regulations have been enacted and are summarized here.

- The length of protection has been increased to 20 years for most crops, and 25 years for trees and vines.
- Rights of the owner have been extended to essentially derived varieties, harvested materials, and varieties which require repeated use of the protected variety.
- Under the farmers' exemption, seed may be saved for use on a farm, but no sale to others for reproductive purposes is allowed without permission of the owner.
- Priority is based on the "first to file" rather than the "first to develop."
- Eligibility is extended to first generation hybrids and tuber propagated crops (e.g. potatoes).
- The minimum time allowed to answer questions and provide information is decreased from six months to 30 days.
- The variety may be unique worldwide, and the name must be used when marketing the variety except in the case of lawn, turf, or forage grass seed, alfalfa, or clover seed, which may be sold without stating the variety name.
- Applications filed before April 4, 1995, may be refiled for protection under the amended Act. An additional fee of \$300 is required. The filing date for refiled applications will be the filing date of the original application.

- Labeling recommendations have been changed. If the variety is protected under the 1994 version of the Act, the label should state "PVPA 1994" or "PVPA 1994--Unauthorized Sales for Reproductive Purposes Prohibited."
- Infringement of rights has been expanded to include all methods of transferring title or possession of the variety and all steps in marketing the variety.
- Fees and charges are increased under the amended regulations. The filing fee is \$300; the search or examination fee is \$2,150; and the certificate fee is \$300. A full listing of the fees is shown in the act and regulations and rules of practice. There is now a fee of \$50 required when an applicant requests an extension for responding to a request.

The PVP Act was amended in the 1996 Farm Bill to allow owners of varieties of potatoes that have been marketed for more than four years in another country to apply for and receive protection in the United States during a one-year period after enactment. Protection would be limited to a total of 20 years, including the time protected in another country. The one-year window for applications under this exemption is April 5, 1996, through April 4, 1997.

A complete listing of all protected varieties is available in the "Official Journal of the Plant Variety Protection Office" which may be obtained free upon request from:

Protected Varieties Certified in Ohio

The following list contains varieties being certified in Ohio for the current crop year for which the owner has applied for or received a certificate of Plant Variety Protection. In either case, no one may offer for sale, sexually multiply, or use to produce a hybrid, seed of these varieties without the permission of the owner or applicant. Seed of varieties for which the breeder has invoked the Title V option of the Federal Seed Act may be sold by variety name only as a class of Certified Seed. This list is not a complete list of all protected varieties and is subject to revision on a regular basis.

REMINDER FROM THE OSU OFFICE FOR TECHNOLOGY COMMERCIALIZATION AND KNOWLEDGE TRANSFER

The Office for Technology Commercialization and Knowledge Transfer at the Ohio State University reminds OSIA members that they are not to export seed of OSU Plant Variety Protected Act varieties unless their foreign buyer has a royalty license agreement from OSU. If you are unsure if a particular buyer has a license, please contact Jay Dahlman at 614-292-7945 or dahlman.3@osu.edu .

What Is Certified Seed?

Certified Seed grown in Ohio may be defined as seed certified as to origin and purity of variety. This is accomplished by a system of rigid inspections. The seed growers start out with high performing, known origin varieties which are given certification identification. The crops produced from these seeds are inspected by trained inspectors. The first, or field inspection is made of the growing crop to determine the vigor of plants, varietal purity, freedom from diseases, objectionable weeds and other crop mixture. Crops which pass the field inspection are eligible for the laboratory or final inspection. This inspection is made of the cleaned seed after it has been made ready for sale, and consists of examining the general condition of the seed to be certified, and taking a representative sample of the seed and forwarding it to the Ohio Seed Improvement Association for a purity analysis and germination test. If this inspection shows that the seed meets the minimum requirements for certification, the grower is furnished certification tags. The producer is required to place one of these tags on every container of seed sold as certified. In so doing, the producer guarantees that the seed sold under the tag will conform to the minimum requirements of certified seed.

Why It Pays To Use Certified Seed

Certification is the user's assurance of getting top quality seed. Research and field tests have proven certified seed to be superior. Certification assures the user that the seed which they purchase was grown from planting stocks of known pedigrees; that the fields have been closely inspected, and met the high standards for varietal purity; that the seed has been properly handled during harvesting and cleaning; and that the seed in the bag also meets the high standards set for varietal purity. Clean seed and strong seedlings mean quicker growth and less trouble with weeds.

Certified Seed is more uniform in growth and maturity and more dependable, which reduces the chance of crop failure. These factors combine to give higher yields of better quality crops. These advantages provided by the use of Certified Seed will help cut the cost of production and thus increase net profits.

Special Note: The variety descriptions are provided by the owner or originator of the variety. Ohio Seed Improvement Association does not guarantee the accuracy of their information, nor does it warrant the performance of all the variety(s)/brand(s) descriptions herein.

BRANSON

PVPA 1994

Title V - may be sold only as a class of Certified Seed

BRANSON is a soft red winter wheat bred and developed by AgriPro Wheat. Branson is a medium height semi-dwarf variety with good straw strength. Branson is moderately resistant to septoria leaf blotch, stripe rust, and powdery mildew. It has intermediate resistance to soil-borne mosaic virus and leaf rust. Primary adaptation is the wheat growing regions of Missouri, Illinois, Indiana, Michigan, and Ohio. Branson has been uniform and stable since 2003. Less than 0.8% of the plants were rogued from the Breeders Seed increase in 2004. Approximately 90% of the rogued variant plants were taller height wheat plants (8 to 15 cm), and 10% were awned plants. AgriPro Wheat maintains seed stock and certified classes of Foundation, Registered, and Certified. Certified seed stocks of Branson will be available in the fall of 2005.

Soft Red Winter Wheat

GP 463

GP 463 is a certified soft red winter wheat variety released by GROW PRO GENETICS. The variety is described as having a smooth head type, medium early heading date, 34" plant height, and acceptable disease ratings with dependable Fusarium tolerance. This variety was accepted for certification by the Association of Official Seed Certifying Agencies (AOSCA) in 2021. GP 463 was selected for high-yield, test weight and height. This new variety was developed by use of a doubled haploid breeding program. The variety is adapted to the Midwestern states and eastward to Pennsylvania and tidewater area of Virginia. GP 463 exhibits above average resistance to Fusarium head blight and leaf rust. It is susceptible to stripe rust and powdery mildew. Up to 1% variant plants may be encountered in subsequent generations. These may include tall (>3 inches) or awned plants. The variety is a three-generation kind with Foundation, Registered, and Certified seed classes maintained by Grow Pro Genetics. A patent for the variety is anticipated in year 2022. Certified acreage is not to be published by individual certifying agencies or AOSCA.

GP 747

Title V - may be sold only as a class of Certified

GP 747 is a certified soft red winter wheat variety released by GROW PRO GENETICS. This variety was accepted for certification by the Association of Official Seed Certifying Agencies (AOSCA) in 2021. GP 747 was selected for high-yield, lodging, and height. GP 747 was developed by use of a doubled-haploid breeding program. It is a medium, awned variety widely adapted to the central United States area. It exhibits above average resistance to powdery mildew, soilborne mosaic virus, and bacterial streak. It is moderately susceptible to Fusarium head blight and leaf rust. Up to 1% variant plants may be encountered in subsequent generations. These may include tall (> 3 inches) and awnless plants. Seed stock classes will be maintained for Foundation, Registered, and Certified seed classes. Plant Variety Protection is anticipated in 2021 and GP 747 may only be sold as a class of certified seed. Certified acreage is not to be published by individual certifying agencies or AOSCA.

Soft Red Winter Wheat

KOKOSING

KOKOSING (OH-08-206-69) is a 2016 Certified variety Ohio State University release. This is a non-protected variety whose yield performance on the average is 13 bu./acre higher than “Malabar” and “Bromfield,” three days earlier in maturity, and two to three inches shorter in height than both of the previously mentioned varieties. In addition, this variety has excellent foliar ratings as regards foliage health and good FHB resistance, strong straw strength and below average test weight. It is resistant to powdery mildew and Stagonospora leaf blotch and moderately resistant to stripe rust. This variety has tan colored chaff and is awnless. Kokosing is a three-generation (F, R & C) Certified variety with a royalty of \$.01/lb. for Registered and Certified seed classes sold. Seed stock will be maintained by Ohio Foundation Seeds, Inc.

MALABAR

MALABAR (OH02-7217) is a soft red winter wheat variety developed by the Ohio Agricultural Research and Development Center and released to the Ohio Foundation Seeds organization for increase in the fall of 2007. This variety was released due to its adaptation to Ohio, outstanding tolerance to Fusarium Head Blight, and excellent resistance to lodging. In 23 trials, Malabar yielded 3.8 bu. /acre more than "Hopewell," and its test weight was 0.5 lbs. /bu. greater. This new variety was second in yield performance out of 25 entries tested in the 2007 Five-State Yield Trial. Malabar is one to two inches taller than Hopewell and heads out about the same time. Malabar has tan chaff, is awnless, and has moderate resistance to powdery mildew and Stagonospora leaf and glume blotches. Malabar has an exceptional Fusarium Head Blight Index that is similar to that of the resistant check, Truman. Certified classes of seed will be Foundation, Registered and Certified.

STARBURST

PVPA 1994

Title V - may be sold only as a class of Certified Seed

STARBURST is an awnless soft red winter wheat bred by KWS Cereals and exclusively licensed to the Ohio Seed Improvement Association. It was developed specially for use in the extensive Great Lakes Region market. It was released in 2017. Starburst is very short with excellent straw stiffness to respond well to higher N-input. It is a medium late-maturing line with good winter hardiness. Starburst has very good resistance to powdery mildew, stripe rust and leaf rust, moderate resistance to Fusarium Head Blight, and moderately susceptible to septoria leaf blotch and SBMV. The variety has shown up to 0.5% awnletted variant plants and up to 1% tall awned variant plants may be encountered in subsequent generations. Starburst is a three-generation variety (F, R, & C) with application for Plant Variety Protection Act Title V. A royalty is due the originator.

Soft Red Winter Wheat

SUNBURST

PVPA 1994

Title V - may be sold only as a class of Certified Seed

SUNBURST is a proprietary Certified soft red winter wheat (*Triticum aestivum* L.) developed by the Sunbeam Extract Company of Wooster, Ohio and is exclusively assigned to Central Ohio Seed Testing in 2008. Sunburst is widely adapted to the Eastern Corn Belt, more specifically to Ohio, Michigan, Pennsylvania, and parts of Canada. Sunburst is intended for general-purpose wheat market. Sunburst has blue-green head color, an erect-twisted flag leaf, short height, excellent straw strength, and is awnless. Green stage variants include: a combined total of 0.6% tall, awned, and or yellow-green heads. Sunburst was selected due to its excellent winter hardiness, excellent test weight, high-yield potential, good scab resistance, and leaf stripe rust resistance. Ohio Foundation Seeds, Inc. will maintain breeder seed. No seed stock sales are permitted to non-licensed companies or to international firms without the permission of the owner of the variety. A license is required to produce seed of this variety. The Certified classes of seed will be Foundation, Registered, and Certified. Application for PVPA Title V will be made and the Certification option will be elected.

SY 007

PVPA 1994

Title V - may be sold only as a class of Certified Seed

SY 007 is a soft red winter common wheat bred and developed by Syngenta Seeds, Inc. SY 007 was selected for average height, earlier than average maturity, above average appearance, and average kernel soundness using a modified bulk breeding method. SY 007 has shown a medium early maturity, good test weight, and is medium in height. It has shown best adaptation to the primary wheat growing regions of southern IL, IN, KY, MO, Southern OH, and the Del-Mar-VA region of the east coast. It is primarily adapted to a double crop rotation. SY 007, however, may also perform well in areas north of Interstate 70 (I-70) where earlier varieties are sought.

SY 007 shows above average stripe rust and powdery mildew resistance, moderate resistance to Septoria and soil-borne mosaic virus. It shows moderate susceptibility to Fusarium head blight and susceptibility to the races of leaf rust present in the primary area of adaptation.

Syngenta Seeds Inc. maintains seed stock and Certified classes of Foundation, Registered and Certified. Syngenta Seeds, Inc. will maintain the variety by the head row method to produce breeder seed if needed. Plant Variety Protection is anticipated in 2013, and SY 007 may be sold only as a class of Certified Seed. Certified acreage is not to be published by AOSCA and certifying agencies.

Soft Red Winter Wheat

SY 100

PVPA 1994

Title V - may be sold only as a class of Certified Seed

SY 100 is a soft red winter common wheat bred and developed by Syngenta Seeds. SY 100 was selected for average height, average maturity, above average appearance, and average kernel soundness produced as an F1 derived double haploid. SY 100 is well adapted as to be a high-yielding winter wheat in the Midwestern soft red wheat growing regions north of I-70 and in the Mid-Atlantic based on tests throughout the soft red wheat growing regions in the Eastern US. SY 100 has tested moderately resistant to stripe rust, powdery mildew, and barley yellow dwarf virus. It tested moderately susceptible to FHB, soil-borne mosaic virus, and Septoria. It is susceptible to leaf rust. Identifying characteristics include: blue green leaf color at boot stage; recurved, twisted and waxy flag leaf at boot stage; white auricle color; yellow anther color; with apically awnletted awn-type. Syngenta Seeds, Inc. maintains seed stock and certified classes of Foundation, Registered and Certified. Syngenta Seeds, Inc. will maintain the variety by the head row method to produce breeder seed as needed. Royalty fees are anticipated. Certified seed will likely be available for planting in the fall of 2016. Plant Variety Protection is anticipated in 2015, and SY 100 may be sold only as a class of Certified Seed. Certified acreage is not to be published by AOSCA and certifying agencies.

The logo for Grow Pro Genetics features the words "GROW PRO" in a bold, green, sans-serif font, with a registered trademark symbol (®) to the upper right of "PRO". Below this, the word "GENETICS" is written in a bold, blue, sans-serif font. The letters "E" and "I" in "GENETICS" are stylized with horizontal bars through them.

PLANT BREEDING TECHNOLOGY FOR EVERY ACRE.

Soft Red Winter Wheat

SY 547

PVPA 1994

Title V - may be sold only as a class of Certified Seed

SY 547 is a soft red winter wheat bred and developed by Syngenta Seeds, Inc. and released in 2014. SY 547 was selected for average height, earlier than average maturity, above average appearance, and average kernel soundness. This variety has shown a medium maturity, above average test weight, and is medium in height. SY 547 has also shown in a wide adaptation with above average check performance in the Great Lakes Region, Midwest, Mid-South, Northeast, and Mid-Atlantic. The highest yield advantage has been in the double crop region of Southern IL.

SY 547 has tested above average resistance to powdery mildew, soil-borne mosaic virus, and Septoria nodorum. It has tested average tolerance to current races of stripe & leaf rust and Fusarium head blight. It is known to be moderately susceptible to barley yellow dwarf virus. Breeder seed increases were rogued; however, up to 1.0% variant plants may be encountered in subsequent generations.

Syngenta Seeds, Inc. maintains seed stock and Certified classes of Foundation, Registered and Certified seed. Certified seed will be available in 2015. Plant Variety Protection is anticipated in 2014, and SY 547 may be sold only as a class of Certified Seed. Certified acreage is not to be published by AOSCA and certifying agencies.

SY 576

PVPA 94

Title V – may be sold only as a class of Certified Seed

SY 576 is a soft red winter wheat bred and developed by Syngenta Participations AG. SY 576 was selected for grain yield, test weight, maturity, appearance, and disease resistance. SY 576 is primarily adapted to the northern Indiana, southern Michigan, and Western Ohio in the Upper Midwest and the Mid-Atlantic regions. SY 576 has shown high levels of resistance to both leaf and stripe rust, while also exhibiting moderate resistance to Fusarium Head Blight. It is moderately susceptible to both soil-borne mosaic virus and powdery mildew. Identifying characteristics include an awned head type. Syngenta Seeds, LLC maintains seed stock and Certified classes of Foundation, Registered and Certified. Plant Variety Protection is anticipated in 2019 and SY 576 may be sold only as a class of Certified Seed.

Soft Red Winter Wheat

SY VIPER

PVPA 94

May be sold only as a class of Certified Seed

SY-Viper is a medium to medium tall height, semi-dwarf soft wheat variety bred and developed by Syngenta Seeds, Inc. It is medium to medium-early in maturity with white chaff. It has shown broad adaptation with very good yield performance and test weight across the major wheat growing areas of Southeast Missouri, Eastern Arkansas, Western Tennessee and Kentucky, the "Delta" region of Mississippi, North Louisiana, Eastern North Carolina, and Northeastern South Carolina. It has shown moderate resistance to the current races of leaf rust in these areas. SY Viper is intended for grain production. Juvenile growth habit is semi-erect. Plant color at boot state is blue-green. Another color is yellow. Flag leaf at boot state is erect and twisted, and wax is present. Head shape is tapering and awnletted. SY Viper may be sold only as a class of Certified Seed and all seed sales are royalty-bearing.

Winter Barley

CERTIFICATION REGULATIONS

Planting Requirements:

Foundation or Registered seedstock

Eligible land

Field Inspection:

Varietal purity, minimum 99.9%

Laboratory Analysis:

Other varieties or off-types, maximum 0.1%

DESCRIPTIONS OF VARIETIES

PUFFIN

Licensed Variety

PUFFIN is a two-rowed proprietary winter malting barley exclusively licensed in 2017 to Ohio Crafted Malt House LLC, by Limagrain Cereal Seeds. It is derived from the cross ('Athos' × 'Maris Otter') × 'Igri' and was developed by The Miln Marsters Group, Kings Lynn, Norfolk UK, and released in 1987. It has been tested in Ohio each year beginning 2010–2011. Winter hardiness in Ohio is superior to that of U.S. two-row winter malting barley varieties, Charles and Endeavor. Puffin has strong straw and is capable of producing good yields. It has resistance to yellow and brown rust but is susceptible to mildew and net blotch. It has medium maturity being similar to “Maja,” but two days later than “Thoroughbred.” Puffin has medium length rachilla hairs, awns longer than grain head, a semi-erect flag leaf, and a plant height of 37-39 inches in Wooster, Ohio. Other characteristics include: medium to strong pigment color on the lower leaf sheaths, flag leaf auricle, and awn tip. Leaf color is medium-green. Puffin is a three-generation variety (F, R & C). The originator specifies that Certified Seed classes sold can be used only for producing grain for malting or feed purposes, and grain is not to be planted or used as non-Certified seed. A license is required for seed production.

SECRETARIAT

U.S. Protected Variety

Title V – may be sold only as a class of Certified Seed

SECRETARIAT is a high-yield, high-test weight, moderately early heading, short stature, six-row winter barley having good winter hardiness. The spikes of Secretariat are erect, strap, and slightly waxy with no overlapping lateral kernels and short awns. It is a potential commodity for feed, food, and fuel ethanol production. Grain of Secretariat is superior overall to those of many hulled varieties. It is resistant to all of the prevalent diseases in the Eastern U.S. except for Fusarium Head Blight.

THOROUGHbred

U.S. Protected Variety

Title V - may be sold only as a class of Certified Seed

THOROUGHbred is a high-yielding, full season, awned, six-row hulled winter feed barley having very good straw strength, high test weight, and bright plump seed. On average, head emergence of Thoroughbred is two days later than Wysor, four days later than Nomini and Price, and six days later than Callao. Average plant height is three to four inches taller than Callao and Price and three to four inches shorter than Wysor and Nomini. Straw strength is similar to those of Price and Nomini and better than those of Wysor and Callao. As a feed grain and rotational crop, Thoroughbred is superior to Nomini and Callao. Thoroughbred is resistant to powdery mildew and barley yellow dwarf virus. It is moderately susceptible to leaf rust and net blotch. This variety has three classes (F, R & C) and has a thirty-cent/unit royalty.

DESCRIPTIONS OF VARIETIES

SPOONER

SPOONER is a high-yielding winter rye (diploid) released by the University of Wisconsin-Madison in 1992. Grain yields and test weight exceed those of Hancock. Spooner heads about one day earlier than Hancock and has excellent winter hardiness. Spooner is tall, averaging about three inches taller than Hancock, but lodging less than Hancock. Kernels are wheat-like in color predominate. Due to PVPA expiration on this variety, the originator now allows production of the Registered class in states with the (R) class system. Classes allowed are (F, R & C).

DESCRIPTIONS OF VARIETIES

COMET

Limited to two generations - Foundation and Certified

COMET is easily distinguishable from Oberkulmer, Champ, Maverick, and Sungold due to its extreme shortness of stature, its earliness, and its cream or off-white chaff color. Comet has averaged 20 inches shorter than Oberkulmer, and about 12 inches shorter than Maverick or Sungold. It averages about the same date of heading as Maverick and is several days earlier than Oberkulmer and Champ. The cultivar appears well adapted to Midwest growing conditions. Late seedings of increases indicate the cultivar has excellent winter hardiness. Comet appears to have very high protein content, averaging 1.5% higher than Oberkulmer (whole grain) in tests prior to 1998. This cultivar is exclusively licensed to French's Hybrids as a royalty-bearing variety.

MAVERICK

Limited to two generations - Foundation and Certified

MAVERICK is easily distinguishable from Oberkulmer and Champ in that it is white chaffed at maturity. Maverick is several days earlier and several inches shorter in height than Champ. Maverick exhibits much improved winter survival over other varieties as well as improved test weight. Protein contents are very acceptable, and baking qualities are superior to Oberkulmer. In five years of testing, Maverick has nearly a nine-bushel per acre yield advantage over Oberkulmer. This line appears well adapted to Midwest growing conditions and has performed very well in trials in the upper Midwest and Canada. This cultivar is exclusively licensed to French's Hybrids, Inc. as a royalty-bearing variety.

Winter Spelt

SONIC

Limited to two generations - Foundation and Certified

SONIC was released in 2014 by the Sunbeam Extract Company of Indiana for marketing in the U.S. primarily as a forage cultivar to be grown in the Eastern states. It is intended to replace the old European cultivar, Oberkulmer Rottkorn. While no forage yields of Sonic or Oberkulmer are available, Sonic is expected to equal or outyield Oberkulmer Rottkorn in forage production due to its equal height, more vigorous growth habit, and improved disease resistance. Since Sonic is intended for use as a forage crop, grain yield is important to only the sole licensee. Sonic appears to be a very stable, uniform, and pure cultivar as observed by the originator over a period of several years. Few off-types have been observed. This cultivar has been exclusively licensed to French's Hybrids, Inc. of Wakeman, Ohio as a royalty-bearing cultivar.

SUNGOLD

Limited to two generations - Foundation and Certified

SUNGOLD is easily distinguishable from Oberkulmer, Champ, and Maverick, the only other spelt cultivars currently certified since it has a medium-brown chaff color. Sungold is also several days earlier to head than Oberkulmer and Champ but about three days later in heading than Maverick. Sungold is also several inches shorter than Oberkulmer and Champ, being about the same height as Maverick. The cultivar appears well adapted to Midwest growing conditions and has also performed well in Montana and Canada. This cultivar is exclusively licensed to French's Hybrids, Inc. as a royalty-bearing variety.

Triticale

CERTIFICATION REGULATIONS

Planting Requirements:

Foundation or Registered seedstock
Eligible land

Field Inspection:

Varietal purity, minimum 99.9%

Laboratory Analysis:

Other varieties or off-types, maximum 0.1%

DESCRIPTION OF VARIETIES

841446398

PVPA 1994

841446398 is an awnletted winter triticale developed by Northern Agri-Brands LLC. It was selected for its awn length, lodging resistance, substantially higher seed yield, and high silage forage yield. This variety possesses excellent lodging tolerance. Identifying characteristics are early maturity and awnletted. Recognized classes are Breeder, Foundation, Registered, and Certified. Application for Plant Variety Protection is anticipated in 2017.

NT09423

Title V - PVPA Protection to be Applied For

NT09423 is a triticale variety “NT09423” is a new University of Nebraska release. It is a hexaploid, winter-type triticale that is rated as very late for its maturity, being one day later than the NE4227. Plant height is rated short at 114 centimeters.

The plant color at boot stage is green. Anthocyanin is absent on the stem. Stem neck shape is described as straight. The flag leaf is twisted, and waxy bloom is present on the leaf at boot stage. Leaf carriage is upright, and the auricle color is described as white or colorless. The grain head is mid-dense, fusiform in shape and awned. Awn color is tan, and the seed color is amber. Performance data indicates the variety has good winter hardiness. NT09423 is a three-generation variety (F, R, C).

Noxious Weed-Free Forage & Mulch Certification

There is a growing demand in North America for the use of certified noxious weed-free forage and mulch as a preventative program to limit the spread of noxious weeds. This voluntary certification program is designed to assure that forage (straw, hay, cubes and pellets) and mulch sold with proper certification identification meet minimum standards designed to limit the spread of noxious weeds. Buyers are provided assurance that forage and mulch certified through this program meet these minimum standards.

Ohio Seed Improvement Association has been designated as the official Noxious Weed-free Forage and Mulch (NWFF & M) Certification Agency in Ohio. Program standards comply with the Regional Weed-Free Forage Certification Standards developed by the Regional Weed-Free Forage Committee of the North American Weed Management Association. The Regional Weed-Free Forage Committee has established minimum standards to allow uniform participation by states and provinces in the program. Forage and mulch certified under the OSIA certification program with proper certification documents or markings attached will be eligible to be shipped into restricted areas in the United States and Canada where only forage and mulch certified under the Regional Forage Certification Standards can be used.

The following producers have applied for certification of noxious weed-free forage and/or mulch. (Straw or Straw and Hay).

Identity Preserved (IP) Grain Program

The following Identity Preserved (IP) Grain Program is available from OSIA Active and Limited members. This program provides an unbiased, third-party, quality control traceability program beginning with a specific Certified, Quality Assurance or brand variety. The comprehensive system includes field inspection, post-harvest laboratory testing, and post-season grow-out testing for value-added for grain.

Grain carrying the "IP" tag or logo has met the minimum genetic purity standards based on the breeder's agronomic description. The IP system is a comprehensive program to help assure the production of genetically pure product or grain by planting seed of a known specialty commodity or variety, use of extensive record keeping, field inspection, and post-harvest testing validating the end user's or applicant's specifications.

Participation in this program is voluntary and illustrates these companies' efforts to use effective quality control in value-added grain production, conditioning, and marketing. The services and records generated under this system provide quality surveillance for every customer and can be used as a "Block Chain" program.

OSIA's IP program is officially sanctioned and Trademarked by the Association of Official Seed Certifying Agencies (AOSCA). Permission to use the logo on tags, certificates, or on the final product can be obtained from OSIA for a fee. For more information regarding specific products produced under the IP program, please contact the participating company or OSIA.

Quality Assurance (QA) Program

The following companies have produced seed under the Quality Assurance Program. This program provides an unbiased quality control system of field inspection and laboratory testing for varieties, brands, and blends.

Seed carrying the green "QA" tag has met the minimum genetic standards of not more than 0.5% off-type plants or seeds based on the breeder's agronomic description.

Participation in this program is voluntary and illustrates these companies' efforts to use effective quality control in seed production, conditioning, and marketing. The services and records generated under this system provide quality assurance for every customer.

For more information regarding specific products produced under the QA program, please contact the participating company.

Seed Quality

The quality of the seed you plant is most important. Good seed should be true to type for the variety or hybrid selected, high in germination, free from insect or disease damage, free of weed seeds, and, in general, should be of high quality. Buying or using poor quality seed can be, and usually is, expensive. All seed sold in Ohio must be labeled as to germination, weed content (if any), purity, etc. Read the tag or label before you buy the seed. The information on the tag or label will give you some indication of the quality of the seed contained therein.

Factors That Determine Seed Quality

PURE SEED - is the percentage of the seed that will produce plants true to type for that variety.

GERMINATION - is the percentage of seed that will produce normal plants under favorable conditions. Note: "Does not include abnormal seedlings."

WEED SEED - is the percentage, by weight, of seeds considered weeds by law, official regulations, or by general usage.

INERT MATTER - is the percentage, by weight, of broken seeds that are one-half or less the original size, and all foreign material such as chaff, stems, soil particles, etc.

OTHER CROP SEED - is the percentage, by weight, of seeds not of the crop or specified variety.

HARD SEED - is the percentage of seeds which remain hard but sound at the end of the prescribed test period. They normally do not contribute to current field stand, but may germinate at a later date.

SEED TREATMENT - is the applying of material (normally chemical) to seed that will protect the seed from any soil and seed-borne diseases and insects.

SOURCE - is important in seed quality, just as it is in any other commodity. Always buy from a reputable dealer. A reputable dealer is interested in your welfare.

PLS (PURE LIVE SEED) - is the percentage of pure seed that will germinate. It is determined by multiplying the percent of pure crop seed times the germination percentage and dividing by one hundred.

Ohio Farmers Stay in the Lead Through Research and Development

The last few years have seen the introduction of new high-yielding wheat varieties by the Ohio Agricultural Research and Development Center. These varieties are providing Ohio farmers with the means to increase yield significantly through superior genetic potential.

*Ohio Seed Improvement Association
Supports Varietal Development Research*

Such improvements in genetic ability and yield potential come only through years of making crosses, observation, study, and selection. Such meticulous research also requires tremendous monetary support. For over 50 years, the Ohio Seed Improvement Association has contributed significantly to varietal development research.

Over the past 50 years, the Association has donated over \$1,000,000 to keep the program moving forward. These dollars hire much-needed equipment and technicians who assist in all aspects of the work. Crossing, planting, observation, testing, harvesting, and packaging the seeds require skilled help. OSIA contributions help keep the program moving ahead.

Ohio Certified Seed Means Progress

NOTICE TO BUYERS

This Certification Label is valid only when attached to a container or bag of seed of the specified variety and lot number.

The Ohio Seed Improvement Association (OSIA) is a nonprofit corporation authorized by the laws of the State of Ohio to establish standards and procedures for seed certification. The OSIA provides certification labels to seed growers based upon the submission by growers to OSIA of representative samples of seed for analysis of the genetic purity of the seed. The grower and/or seller, by attaching this label to a particular lot of seed, is representing to both the OSIA and the buyer that the seed has been produced, conditioned and inspected in accordance with the standards and procedures established by the OSIA, and that the seed described on the label meets the minimum requirements. THE GROWER AND/OR SELLER WHOSE NAME APPEARS ON OR IS ATTACHED TO THE CONTAINER OR BAG OF SEED IS SOLELY RESPONSIBLE FOR THE SEED ANALYSIS AND OTHER INFORMATION THEREON, AND FOR THE PROPER USE OF THIS CERTIFICATION LABEL.

OSIA IS NOT THE SELLER AND MAKES NO WARRANTIES, WHETHER EXPRESS OR IMPLIED (INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY), AS TO THE SEEDS SOLD BY GROWER OR SELLER. THE BUYER IS PURCHASING THE SEEDS "AS IS" WITH RESPECT TO OSIA.

OHIO SEED IMPROVEMENT ASSOCIATION

Dublin, Ohio 43017-0477

Variety/Brand Descriptions

The descriptions are provided by the grower or originator of the variety or brand. Ohio Seed Improvement Association does not guarantee the accuracy of their information, nor does it warrant the performance of the varieties/brands described herein.

Inquiries for seed and requests for samples should be sent directly to the growers listed, not to the Ohio Seed Improvement Association.

Address and telephone numbers of growers may be found in the front section. Readers may download additional directory copies from OSIA's web site <http://www.ohioseed.org>.

Field Application Disclaimer

Ohio Seed Improvement Association Application for Inspection of Seed Crop, Inspection Agreement Disclaimer and Limit of Liability

Member hereby requests that the Ohio Seed Improvement Association (hereinafter referred to as OSIA), the official seed-certifying agency designated by the Ohio Department of Agriculture, inspects certain seed crops as set forth in the member's inspection request forms.

It is expressly agreed by the member that the inspection services hereby requested to be provided by OSIA and its employees and agents, as provided by law and by Ohio Seed Law No. 907.02 as amended, are limited to the following:

- (a) Visual field inspection for varietal purity;
- (b) Visual field inspection for presence of disease;
- (c) Visual field inspection for overall crop management;
- (d) For post-harvest testing (varietal purity and diseases), inspection shall be limited to visual inspection.

All inspections conducted by OSIA shall be based upon sequential sampling methods pursuant to accepted inspection procedures. Laboratory testing, when requested by the member or required or deemed necessary by OSIA, shall be paid for by the member.

The member agrees to provide OSIA with complete and accurate records and field maps as requested by OSIA. The member also agrees to inform OSIA as to any changes in the conditions of the crop which occur subsequent to the field inspection. Failure of the member to meet these conditions shall render any certification granted by OSIA void.

Visual field inspection approval does not guarantee that the crops will be certified. Such approval means only that the crops are eligible for subsequent steps in the certification process as required by Ohio Seed Certification Regulations.

Certification from OSIA means that the SAMPLES INSPECTED are within the tolerances for purity and disease as set forth in Ohio Seed Certification Regulations.

CERTIFICATION DOES NOT CONSTITUTE A GUARANTEE OR WARRANTY, NOR IS IT A REPRESENTATION THAT THE COMMODITY IS MERCHANTABLE OR FIT FOR A PARTICULAR PURPOSE. THE CERTIFYING AGENCY MAKES NO IMPLIED OR EXPRESS WARRANTIES OR REPRESENTATIONS AS TO FREEDOM FROM DISEASE OR LEVEL OF QUALITY. CERTIFICATION MEANS ONLY THAT, AT THE TIME OF INSPECTION, THE SAMPLED PLANTS AND/OR SEED OF EACH LOT INSPECTED CONFORMED TO THE STANDARDS AND TOLERANCES AS SPECIFIED IN THE RULES.

Field Application Disclaimer (Continued)

It is understood and agreed that any liability of OSIA is limited to the amount of the fees incurred by the member for the inspection.

I have read, understand, and agree to the foregoing terms and conditions, and I herewith make APPLICATION for SEED CROP INSPECTION of the varieties listed in the inspection requests for the purpose of having seed therefrom certified by the Ohio Seed Improvement Association, designated an official seed certifying agency by the Ohio Department of Agriculture. I agree to abide by the by-laws and the policies of the Association, and the Ohio Department of Agriculture Certification of seed, tubers and plants No. 907.02 as amended, as applicable to my application. By submission of this field application I, the producer or representative of the producer, hereby agree to the terms and conditions of this agreement. Members are also required to notify OSIA if their field(s) have not been inspected prior to harvest.
